

# Download File PDF Hardy Weinberg Equation Pogil Answers

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Doc 131 McLaughlin

**Population Genetics**

Consider the population of four alleles:

Allele	Frequency
AA	0.25
Aa	0.50
aA	0.25
aa	0.00

What do these numbers represent, for which generation?

1. What is the probability of offspring from a population getting a recessive allele?  
0.25 + 0.25 = 0.50

2. If you need to represent the frequency of the dominant allele only, how to represent the frequency of the recessive allele, then what will  $p + q$  equal?  
 $0.25 + 0.25 = 0.50$

3. How can knowledge of alleles to calculate the probability of offspring from the population being null of these genotypes. Support your answer with mathematical equations.  
(Start by using the same case as you have seen in offspring - AA or aa)  
 $0.25 + 0.25 = 0.50$      $0.25 + 0.25 = 0.50$      $0.25 + 0.25 = 0.50$

4. What is the probability of offspring from a population getting a dominant allele (i.e. the allele frequency)?  $0.25 + 0.25$

5. What is the probability of offspring from a population getting a dominant allele (i.e. the allele frequency)?  $0.25 + 0.25$

6. What is the probability of offspring from a population getting a dominant allele (i.e. the allele frequency)?  $0.25 + 0.25$

7. Using what you know, look for the probability of offspring from a population being null of the following genotypes:

Genotype	Probability
AA	$0.25^2$
Aa	$2 \times 0.25 \times 0.25$
aa	$0.25^2$

8. What is  $p^2 + 2pq + q^2 = 1$
